

## Aeronauts Fun Sheet - Helicopters

Can you fly?

What can we use to help us fly?

We can use helicopters to help us fly.

Sit in our helicopter and pretend to be the pilot.

**The Pilot flies the helicopter.**

There is a stick in front of the seats called a cyclic control. By moving this stick you can move forwards, backwards and side to side.

The lever (called a collective pitch lever) in between the seats helps you control how high you are in the sky.

Can you think of any jobs that a helicopter might have?

Can you find the words listen below in this word search?

C	A	V	I	S	E	A	R	C	H	D	U	E	S	P
